What can I do with my major...

Program Description

The Radiography program consists of coursework and experience leading to an Associate of Applied Science Degree. Radiography is an exciting and dynamic field of medical imaging. Radiographers use radiation generating machines and associated equipment to produce images of internal body structure/organs. These images contain vital information needed by the physician for proper patient diagnosis.

Radiography students receive classroom instruction at Bacone College and clinical experience at affiliated hospitals and clinics around Muskogee and throughout the state. Based upon educational criteria, first-year students spend 16 hours per week in the clinic while second-year students spend 24 hours per week.

SAMPLE CAREERS

- Radiologic Technologists

ADDITIONAL INFORMATION

- Students are exposed to a variety of radiologic technology modalities such as MRI, CT, Special Procedures and Mammography. Other areas of exposure include: Radiation Therapy, Nuclear Medicine and Diagnostic Medical Sonography
- Students who are selected for admission begin courses in the Summer. Students can enroll in general education courses at any time then apply for admission for the following summer semester.

School of Health Sciences
Requirements:
- 71 credit hours
- 2.0 cumulative GPA
